X-RAY T-TUBE CHILANGIOGRAM

PROCEDURE: Under aseptic precautions, soluble contrast was injected slowly through the T-tube. Serial radiographs were obtained. Radiographs were obtained in AP and Lateral views.

FINDINGS:

- There is normal opacification of the intra and extra hepatic biliary channels without filling defect within the common bile duct .
- No stenosis or abnormal dilatation of the common bile duct is seen .
- No evidence of biliary leakage.

IMPRESSION: NO SIGNIFICANT ABNORMALITY.
