Koliwada Sumerpur Rajsthan Pali (306902)

## Summary

Aspiring Data Analyst with a strong foundation in Python, SQL, and Power BI. Currently gaining hands-on experience through a Python Data Analytics internship, focusing on data cleaning and visualization to drive insights.

---

## Education

### B.tech computer science engineering

CLG Institute of engineering & Technology Sumerpur • Koliwada Sumerpur Rajasthan Pali (306902)

06/2025

B.Tech in Computer Science & Engineering with Scholarship.

Completed online course on "Geo Data Processing Using Python".

Certified in Basic Computer Operations and MS Excel.

Hands-on experience in Drone Making & Flying (Technical Project).

Maintained a consistent and high academic GPA.

---

## Skills

Python, MySQL, Power BI, Microsoft Office, Data Analytics, Data Visualization, Time management, Computer literacy

---

## Experience

### Data Analyst Intern

Maxgen Technologies pvt.ltd • Pune Maharashtra

08/2025 - Present

Learning and applying Python for data manipulation and analysis.

Working with SQL to query and manage databases effectively.

Creating data visualizations and dashboards using Power BI and MS Excel.

Assisting in identifying data patterns to support business decision-making.

Practicing daily on real-world datasets to improve analytical accuracy.

---

## Languages

English, Hindi

---

## Certificates

Basic & M.S. Office, Canva, Geodata processing using python

---

## Projects

1. HR Data Analytics (Power BI Project)

Designed an interactive Power BI Dashboard to analyze employee data and visualize key HR metrics like turnover and performance.

Cleaned and transformed raw HR data using Power Query to ensure accuracy in reporting.

Used DAX functions to create custom measures for tracking department-wise headcount and attendance trends.

## 2. Sales Data Exploratory Data Analysis (EDA - Python)

Performed Exploratory Data Analysis (EDA) on a sales dataset using Jupyter Notebook to identify top-performing products and regional trends.

Utilized Python libraries like Pandas and NumPy for data cleaning, handling missing values, and data manipulation.

Visualized sales insights and seasonality patterns using Matplotlib and Seaborn to help in business forecasting.
