

G SATYA PAVAN

satyapavangunda8@gmail.com | +91 7893843232 | linkedin/g-satya-pavan |

I am a recent Software Engineer graduate skilled in Machine learning, and Software Development. Aspiring to excel as a Data Scientist, I am eager to apply my technical expertise to solve complex challenges.

Education

Vellore Institute of Technology - Chennai , Master of Technology(Integrated)	July 2019 – July 2024
• CGPA: 7.05/10	
Sri Chaitanya Junior College - Guntur , Intermediate Education(+1 and +2)	June 2017 – April 2019
• CGPA: 7.9/10	
Schalors School - Piduguralla ,10th standard	May 2017
• CGPA: 7.8/10	

Skills and Technologies

SAP BASIS,: SAP System Installation (overview) •SAP System Landscape Architecture understanding • Client Administration (Create, Copy, Delete) • User Administration (Creating users, roles, authorizations) • Transport Management System (TMS) – Basics of transporting objects

Programmming Languages: Python , SQL,

Data Analysis : Pandas, NumPy, Power BI, Excel (basic), statics Customer Due Diligence (CDD),Enhanced Due Diligence (EDD) ,KYC/AML Operations,

Machine Learning : Scikit-learn, Random Forest, Decision Trees ,basic syntax knowledge

Projects

Wine Quality Prediction | Machine Learning

- Wine quality prediction aims to develop a model that accurately predicts a wine's quality based on its chemical properties. It uses historical wine data to train the model, enabling it to assess the quality of new wine samples.

Airport Data Analysis in Big Data | Data Analytics

- Analyzed a large airport data to extract insights and patterns, created visualizations to identify trends, and built a machine learning model to predict outcomes, showcasing the potential of big data analytics.

Hand gesture recognition using Machine Learning | Machine Learning and AI

- Hand gesture recognition will us in the number of fingers in the hand gesture is determined using CNN by analyzing the fault spots in the gesture. The captured gesture is processed through a 3-Dimensional Convolutional Neural Network. CNN is then used sequentially to identify the current gesture.

Anemia detection using machine learning by Eye Images | Machine Learning

- The project is to develop a predictive model for anemia detection using eye images. The dataset will be used to train and evaluate decision tree, random forest.

Certification's

Fundamentals of data analytics Future Skills Prime	(Oct - 2022)
Full stack developer Pre-grad	(Feb - 2023)
Introduction To Generative AI Google cloud ,Badge Completion of Badge	(Feb - 2024)
Data Visualisation : Empowering Business With Effective Insights Forage	(Dec - 2024)
Data Analytics Job Simulation : Deloitte Completion of Certification Forage	(April - 2025)

I hereby declare that all the above mentioned information given by me is true to the best of my knowledge
