Test Description	Value(s)	Unit(s)	Biological Reference Interval
------------------	----------	---------	-------------------------------

THYROID PROFILE TOTAL

Sample Type : SERUM

TRI-iodo Thyronine (T3)

110.0

ng/dL

75 - 210

(CLIA)

Thyroxine (T4)

7.62

µg/dL

3.2 - 12.6

(CLIA)

Thyroid Stimulating Hormone

1.86

µIU/mL

0.35 - 5.50

(ULTRASENSITIVE)

(CLIA)

Interpretation:

Assay results should be interpreted in context to the clinical condition and associated results of other investigations. Abnormal thyroid test findings often found in critically ill clients should be repeated after the critical nature of the condition is resolved. The production, circulation, and disposal of Thyroid hormone are altered throughout the stages of pregnancy.

Hyperthyroidism (overactive thyroid) : Hyperthyroidism (overactive Thyroid) occurs when your thyroid gland produces too much of the hormone Thyroxine.

Hyperthyroidism can accelerate your body's metabolism, causing unintentional weight loss and a rapid or irregular heartbeat.

Hypothyroidism (underactive thyroid) : Hypothyroidism (underactive thyroid) is a condition in which your Thyroid gland doesn't produce enough of certain crucial hormones. Hypothyroidism may not cause noticeable symptoms in the early stages. Over time, untreated Hypothyroidism can cause a number of health problems, such as obesity, joint pain, infertility and heart disease.
