

Auto DM

Account Safety Guidelines

Preventive measures to protect your Instagram account while using Auto DM.

Message Setup

- Rotate your DM message copy every 3–5 days; never keep the same message running too long.
- Use different messaging in every reel.
- Keep messages short and natural — avoid sounding promotional or robotic.
- Do not include links in the first message; send the link only after the user replies.
- Avoid using ALL CAPS or excessive punctuation (!!!, ???) in your messages.

Trigger & Comment Settings

- Set a daily comment trigger limit — ideally no more than 100–150 triggers per day per post.
- Do not activate Auto DM on every reel; select only top-performing or high-reach posts.
- Avoid generic trigger keywords like "yes", "send", or "info" — use specific keywords to filter genuine interest.

Posting Behaviour

- Stick to 1–2 reels per day while Auto DM is active.
- Space out your posts — do not publish two Auto DM reels within the same hour.
- Avoid running multiple Auto DM campaigns simultaneously across several posts.

Account Safety

- Ensure your account is in good standing before enabling automations — no recent strikes or warnings.
- Monitor your DM request folder regularly for any unusual activity.
- If you notice a sudden drop in DM delivery, pause the automation for 24–48 hours immediately.

Meta Compliance

- This tool uses Meta's official API, making it safer than third-party tools — but limits still apply.
- Do not attempt to bypass the built-in limits; they exist to protect your account.
- If Meta sends any warning notification, pause all automations immediately and wait before resuming.
