About Vaayu Infra

Open-Source Powered Cloud Labs, Infrastructure & IT Managed Services

Vaayu Infra is a technology-first infrastructure and managed services company dedicated to delivering enterprise-grade Cloud Labs, robust IT infrastructure, and comprehensive IT Managed Services — all built on the power of leading open-source platforms. By combining the reliability of proven open-source technology with deep engineering expertise, we enable businesses, institutions, and government organisations to reduce costs, gain full control over their technology stack, and scale without vendor lock-in.

From designing and deploying private cloud environments to managing day-to-day IT operations and providing virtual lab infrastructure for education and R&D; — Vaayu Infra is the trusted partner that keeps your technology running, evolving, and working for you.

Business Model	B2B B2G Academic
Technology Stack	100% Open-Source First
Engagement	Project AMC SLA Managed Services
Coverage	Pan-India Remote & On-Site

1. Cloud Labs & Virtual Lab Infrastructure

Scalable, browser-accessible lab environments for learning, R&D;, and testing

Vaayu Infra designs, deploys, and manages Cloud Lab environments that give students, developers, and researchers instant access to fully configured virtual machines, containers, and network topologies — from any device, anywhere. Our open-source-first approach means lower licensing costs, full customisation freedom, and no vendor dependency.

- Custom virtual lab design for universities and training institutes
- Self-service lab provisioning portals for students and instructors
- Pre-configured lab templates: Networking, DevOps, Cybersecurity, Cloud
- Multi-tenant isolation with role-based access control (RBAC)
- Lab lifecycle management — auto-start, suspend, and teardown
- Integration with LMS platforms (Moodle, Canvas, Open edX)
- Browser-based remote desktop access (Apache Guacamole)
- Snapshot and restore capabilities for lab environment consistency
- Usage analytics dashboard for instructors and administrators
- Scalable from 20 to 2000+ concurrent lab seats

2. Cloud Infrastructure Design & Deployment

Private, hybrid, and multi-cloud architectures built on open standards

We architect and deploy cloud infrastructure that fits your workload, budget, and compliance requirements — whether that means a private cloud on-premises, a hybrid model integrating with AWS/Azure/GCP, or a fully managed hosted environment. Every architecture is built using open standards and open-source tooling to ensure transparency, portability, and long-term value.

- Private cloud design and deployment using OpenStack and Proxmox
- Hybrid cloud integration bridging on-premises with public cloud providers
- Containerisation and orchestration with Kubernetes and Docker Swarm
- Software-defined networking (SDN) with OpenVSwitch and Calico
- Storage solutions: Ceph distributed storage, NFS, GlusterFS
- Infrastructure-as-Code (IaC) using Terraform and Ansible playbooks
- CI/CD pipeline setup with GitLab CI, Jenkins, and ArgoCD
- Firewall and network security using pfSense, OPNsense, and Snort
- Backup and disaster recovery with Bacula, Bareos, and Veeam Community
- SSL/TLS, VPN (WireGuard, OpenVPN), and zero-trust network access

3. Open-Source Platforms We Work With

Proven, enterprise-grade open-source tools at the core of every solution

Vaayu Infra's engineers are specialists in deploying, customising, and supporting the leading open-source platforms across cloud, DevOps, monitoring, security, and collaboration. This expertise ensures clients always have access to best-in-class technology without prohibitive licensing fees.

Cloud & Virtualisation	OpenStack · Proxmox VE · oVirt · XCP-ng · KVM / QEMU
Container & Orchestration	Kubernetes (K8s) · Docker · Helm · Rancher · OpenShift (OKD)
Monitoring & Observability	Prometheus · Grafana · Zabbix · Nagios Core · Elasticsearch (ELK Stack)
Networking & Security	pfSense · OPNsense · OpenVPN · WireGuard · Snort / Suricata IDS
Storage & Backup	Ceph · GlusterFS · MinIO (S3-compatible) · Bacula · Bareos
Automation & DevOps	Ansible · Terraform · Jenkins · GitLab CE · ArgoCD · Nexus
ITSM & Helpdesk	iTop · GLPI · Zammad · FreeIPA (Identity) · Keycloak (SSO/IAM)
Cloud Lab Platforms	Apache Guacamole · Open vSwitch · OpenNebula · Moodle LMS

4. IT Managed Services

End-to-end management of your IT infrastructure, so you can focus on your business

Vaayu Infra's IT Managed Services practice delivers proactive, SLA-backed management of your entire IT environment — from servers and networks to applications and security. Our NOC/helpdesk team operates around the clock, ensuring maximum uptime, rapid incident response, and continuous optimisation of your infrastructure.

Service Area	What's Included	SLA
Infrastructure Monitoring	24/7 server, network, and application monitoring via Zabbix/Prometheus/Grafana	99.9% uptime SLA
Helpdesk & IT Support	L1/L2/L3 ticketing via GLPI/Zammad; remote and on-site support	4-hr response / 8-hr resolution
Patch & Update Management	OS and application patching, vulnerability scanning, change management	Monthly patch cycles

Backup & DR Management	Automated backup scheduling, testing, and disaster recovery drills	Daily backup verification
Security Management	Firewall management, IDS/IPS tuning, log analysis, compliance reporting	Weekly security reviews
Cloud Ops Management	OpenStack / Kubernetes cluster health, scaling, and cost optimisation	Continuous optimisation
IT Asset Management	CMDB maintenance using GLPI; licence tracking and lifecycle planning	Quarterly asset audits

5. Service Delivery & Engagement Models

We offer flexible engagement models designed to meet the budget, scale, and operational maturity of each client — from one-time project implementations to long-term fully managed partnerships.

Engagement Model	Best For	Key Features
Project-Based	One-time infra builds or cloud migrations	Fixed scope, timeline & deliverables; handover with documentation
Annual Maintenance Contract (AMC)	Ongoing support for existing infrastructure	Scheduled maintenance, patching, and priority incident support
Fully Managed IT (MSP)	Organisations without in-house IT teams	End-to-end management: monitoring, support, security & reporting
SLA-Based Support	Critical production environments	Defined response/resolution SLAs with escalation matrices
Consulting & Advisory	Cloud strategy and architecture guidance	Architecture reviews, technology selection, proof-of-concept build

6. Why Vaayu Infra?

What sets us apart in Cloud & IT Managed Services

Open-Source First	We use best-in-class open-source platforms — eliminating proprietary lock-in and reducing your total cost of ownership by up to 60%.
No Vendor Lock-In	Every solution we design is built on open standards. You own your infrastructure — portability and flexibility are guaranteed.
End-to-End Ownership	From architecture and procurement to deployment, management, and support — we own every stage of the service lifecycle.
Certified Engineers	Our team holds certifications in Linux (RHCE/LFCS), Kubernetes (CKA), OpenStack, and cloud security — bringing verifiable expertise to every engagement.
Transparent Operations	Clients get full visibility into their infrastructure: real-time dashboards, monthly reports, and documented runbooks for every system we manage.
Scalable & Future-Ready	Whether you're a 20-seat startup or a 2,000-seat enterprise, our modular architecture scales with you — no rip-and-replace, ever.

Industries & Client Segments We Serve

Universities & Colleges	IT & Software Startups	Enterprises & MNCs	Government & PSUs
Healthcare & Hospitals	BFSI & Fintech	Manufacturing & Industry	Telecom Companies
System Integrators	Media & Broadcasting	E-Commerce & Retail	Defence & Aerospace

Company Information

Company Name	Vaayu Infra Solutions
